

TIKHON V. VISHNYAKOV

MLOps / DevOps Engineer Intern | DevSecOps Specialist

Phone: +7 (916) 640-31-43 Telegram: @noonaameen Email: tikhon.vishnya@gmail.com GitHub: github.com/4erryy

Location: Moscow, Russia (Open to Office / Hybrid / Remote) | Age: 19

SUMMARY

Highly motivated junior specialist specializing in practical information security, systems automation, and DevSecOps. Deeply understand the core mechanics of privacy enhancement, data protection, and leak prevention. Focus on evaluating the security posture of desktop and web environments, infrastructure monitoring, and designing production-ready, modular automation systems using Python. Passionate about transitioning into MLOps/DevOps environments to orchestrate high-availability continuous delivery pipelines and robust containerization workflows.

TECHNICAL SKILLS

Languages & Core: Python, FastAPI, Pandas, Selenium, JSON, API Requests, OOP

Automation & Scripting: Bash, PowerShell, System Automation, Infrastructure Scripting

SysAdmin & Infrastructure: Linux (Kali Linux), Virtual Environments (venv), Networking, OpenVPN, Environment Isolation

Databases & Monitoring: SQL (SQLite), Log Management, SIEM Concepts, Real-Time Event Streaming

Methodologies & Compliance: DevSecOps, Threat Modeling, Security Hardening, TZI, FSTEK

Soft Skills: Requirements Analysis, System Documentation Development, Critical Thinking, Incident Investigation

Languages: English (B2 — Upper-Intermediate), Russian (Native)

PROJECTS & PORTFOLIO

SteamLab — Cybersecurity Architecture & SIEM Monitoring Simulation Project

2026

Designed and engineered a distributed client-server architecture from the ground up to research end-to-end telemetry pipeline security, real-time file system modification auditing, and microservices connectivity.

- **Backend & API Development:** Developed an asynchronous server using **FastAPI** backed by an integrated **SQLite** database layer for real-time tracking of remote system states.
- **Automation & Pipelines:** Built standalone real-time background file change tracking mechanisms coupled with asynchronous streaming of operational metrics to **Telegram** via notification micro-services.
- **System Architecture:** Segmented the system into a clean, modular structure consisting of an isolated system agent (``agent/``), central server (``backend/``), bot orchestrator (``bot/``), and a QML-driven desktop application frontend (``ui/``).
- **Configuration Management:** Authored extensive automation tooling in **Bash** and **PowerShell** to cleanly manage dependency lifecycles, environment variables, and seamless service execution.

EDUCATION

Financial University under the Government of the Russian Federation, Moscow

2024 — 2029

Faculty of Information Technology and Big Data Analysis

Specialty: Information Security of Telecommunication Systems (Qualification: Information Security Specialist / Engineer)

GBOU "Kurchatov School" (FMO, former 1189)

Graduated 2024

Secondary General Education — Physics and Mathematics Department.

Acquired a rigorous deep-dive foundation in algorithms, advanced data structures, calculus, and linear algebra.
